MEDPOR® Pterional

Designed to correct temporal hollowing
**MEDPOR® Pterional**

- Designed to correct temporal hollowing in patients who have had surgery involving the pterional approach to the brain. While the pterional craniotomy is one of the most versatile approaches in neurosurgery, it can lead to temporal hollowing.

- Porous - May allow extensive vascular and soft tissue ingrowth, in addition to bone ingrowth at the implant-bone interface.

- Proven – Backed by over 350 clinical reports, MEDPOR’s HDPE has a reduced chance of migration versus silicone, reduced change of resorption versus graft, and superior shaping and cutting versus hydroxyapatite.

- Pre-shaped – Three dimensional design requires minimal shaping, provides natural contour, and maintains shape and volume.

- Reliable – Demonstrated lower infection and displacement rates than silicone and hydroxyapatite.

---

A surgeon must always rely on his or her own professional clinical judgment when deciding whether to use a particular product when treating a particular patient. Stryker does not dispense medical advice and recommends that surgeons be trained in the use of any particular product before using it in surgery. The information presented is intended to demonstrate the breadth of Stryker product offerings. A surgeon must always refer to the package insert, product label and/or instructions for use before using any Stryker product. Products may not be available in all markets because product availability is subject to the regulatory and/or medical practices in individual markets. Please contact your Stryker representative if you have questions about the availability of Stryker products in your area.
