Fast-setting HA bone substitute
HydroSet is part of Stryker’s market leading bone cement portfolio and is an excellent substitute solution for a wide variety of clinical applications in multiple surgical specialties.²

**Indications**
HydroSet is a self-setting, calcium phosphate cement intended for use in the repair of neurosurgical burr holes, contiguous craniotomy cuts and other cranial defects as well as in the augmentation or restoration of bony contour in the craniofacial skeleton.

**Features and benefits**

**Fast-Setting**
HydroSet has been specifically designed to set quickly once implanted under normal physiological conditions, potentially minimizing procedure time.¹

**Excellent Wet Field Characteristics**
HydroSet is formulated to harden in the presence of water, blood, and CSF, which allows for irrigation/wash out of the surgery site during setting.²,³

**Injectable or Manual Implantation**
HydroSet can be applied manually by hand/spatula or injected through a syringe, which enables users to better meet unique closure needs.⁴

**Osteoconductive**
HydroSet is a calcium phosphate cement that hardens to form hydroxyapatite and remolds to natural bone through osteoclastic resorption and new bone formation.¹

**Isothermal**
HydroSet avoids thermal injury as it does not give off any potentially damaging heat as it hardens.¹

**Radiopaque**
HydroSet is visible on postoperative X-rays.¹
